

**15A NCAC 04B .0106 BASIC CONTROL OBJECTIVES**

(a) An erosion and sedimentation control plan may be disapproved pursuant to 15A NCAC 4B .0118 if the plan fails to address the following control objectives:

- (1) Identify Critical Areas: Identify site areas subject to severe erosion, and off-site areas especially vulnerable to damage from erosion and sedimentation.
- (2) Limit Exposed Areas. Limit the size of the area exposed at any one time.
- (3) Limit Time of Exposure. Limit exposure to the shortest feasible time.
- (4) Control Surface Water. Control surface water run-off originating upgrade of exposed areas in order to reduce erosion and sediment loss during exposure.
- (5) Control Sedimentation. All land-disturbing activity is to be planned and conducted so as to prevent off-site sedimentation damage.
- (6) Manage Storm Water Runoff. When the increased velocity of storm water runoff resulting from a land-disturbing activity causes accelerated erosion of the receiving watercourse, plans shall include measures to control the velocity to the point of discharge.

(b) When deemed necessary by the approving authority a preconstruction conference may be required.
