

15A NCAC 02B .0720 RANDLEMAN NUTRIENT STRATEGY: PURPOSE AND SCOPE

(a) **PURPOSE.** The purpose of the Randleman nutrient strategy is to attain the designated uses of Randleman Lake. All waters of the Randleman Lake (Deep River) water supply watershed are classified for water supply uses and designated by the Environmental Management Commission as a Critical Water Supply Watershed pursuant to G.S. 143-214.5(b).

(b) **SCOPE AND LIMITATION.** The Randleman nutrient strategy rules require controls to reduce nutrient sources throughout the Randleman Lake watershed. These Rules do not address sources for which there is insufficient scientific knowledge to support regulation. The Commission may undertake additional rulemaking in the future or make recommendations to other rulemaking bodies to more fully address nutrient sources to Randleman Lake.

(c) **RULES ENUMERATED.** The following rules, which together shall constitute the Randleman nutrient strategy, shall be implemented for the entire drainage area upstream of the Randleman Lake Dam:

- (1) Rule .0721 of this Section for Urban Stormwater Management;
- (2) Rule .0722 of this Section for Wastewater Discharges; and
- (3) Rule .0724 of this Section for Protection and Maintenance of Riparian Areas.

(d) **PENALTIES.** Failure to meet the requirements of the Rules in this Section may result in the imposition of enforcement measures as authorized by G.S. 143-215.6A (civil penalties), G.S. 143-215.6B (criminal penalties), and G.S. 143-215.6C (injunctive relief).

History Note: Authority G.S. 143-214.1; 143-214.5; 143-215.3(a)(1); 143-215.6A; 143-215.6B; 143-215.6C; Eff. April 1, 1999; Amended Eff. May 1, 2010; Readopted Eff. June 15, 2020 (The provisions of this Rule were transferred from 15A NCAC 02B .0248).
